

# Mollusc Groups

Research Assignment

# Ok everybody... here we go!

- Your assignment today is to get familiar with the different mollusc classes.
- You will be making a presentation on Google Drive and then sharing it with me when you are done.

# Here is what you need to do

- Look up the following classes and learn about the animals in that class.
  - Gastropoda (2 types)
  - Bivalvia (4 types)
  - Cephalopoda (4 types)
  - The numbers mean that there are that many main types of animals in that class for you to research (example: in gastropoda there are snails and slugs)
- For each class, prepare one slide for each main type of animal.
  - (That means you should have a slide for snails and one for slugs)
  - Include the following:
    - Name of the animal
    - Pictures that represent the animals in that group
    - A list of 2 or more characteristics of the animals of that group
      - Choose characteristics that are unique to that group

# Go time!

- Grab a Chromebook and get going. Please remember to put the Chromebooks away correctly!
- Follow the instructions and have fun!
- When you are done, please share it with me [MillerBEHS@gmail.com](mailto:MillerBEHS@gmail.com)
- Due Wednesday
